Easy Apply with LinkedIn -> success rate is low -> a lot of companies but your shortlisted will be difficult

Referrals -> (common points from that employee) -> college, city, ex-company (follow up)

Particular ->

1) Big MNCs (referrals)

2) Startups () - aren't popular, but money + learning would be good.

1-10: devs

10-100

100+

1) YCombinator

sandeeplastname@hugo.com

Read once -> but no response even after a week -> rejection

Generalised resume -> write all (Easy Apply)

Job profile -> tweak resume

Experience > projects > education > awards & achievements

Linkedin & github

Portfolio website (10% candidates)

// AWS certifications (not that easy to get) -> exam is expensive -> proctored

Certification courses

- gfg
- next.js -> (solve on next.js)

Interview strategy sorted?

Asking the HR -> first round about? DSA or DEV (JS/FS/ generic dev) or DESIGN
Entire preparation should actually revolve around whatever was told to you by the HR

Revision sheet -> JS, FS, Node, DSA, Machine Coding, Design (most asked questions, concept, examples)

Confidence ++

Researching around the interviewer (interviewer name) - dev heavy? CP heavy?

- Checkout the linkedin (posts)

Thank You Interviewer Name

- Put a joining post. -> contact that person (try to find common) -> ask about the interview experience?
- Prepared? REJECTED? (not your fault)
- Previous interview experiences
- Never afraid?
